

# SeaShield™ Marine Systems

*SeaShield™ Series 2000FD System designed to withstand the most aggressive environments.*

## Features

- Minimal surface preparation required (no abrasive blasting)
- Fast and easy installation
- Can be applied underwater
- Proven 85-years history of corrosion protection
- One piece jackets
- High impact resistance in aggressive environments
- UV resistant
- Safe to apply and environmentally responsible

## Series 2000FD

**The ultimate heavy-duty pile protection system for pilings in the most aggressive environments**

**S**eaShield™ Series 2000FD System provides splash zone protection for steel and concrete piles. The system is ideal for environments where conditions are too severe for paint systems, epoxies and other conventional forms of protection. SeaShield™ Series 2000FD seals out oxygen and water, effectively stopping corrosion on metal surfaces. The system also prevents spalling and corrosion of steel reinforcement in concrete piles.

The Series 2000FD encapsulates wharf piles, riser pipes and exposed piping in splash and intertidal zones. It accommodates piles with cylindrical and octagonal configurations and is applied with a controlled tensioning system.

The SeaShield™ Series 2000FD System features a controlled application tensioning system.

## Materials

The Series 2000FD Systems stops corrosion by using an 85-year proven petrolatum-based tape. The Denso Marine Piling Tape forms an anti-corrosion membrane by displacing water, sealing out oxygen and forming a moisture resistance bond. A tough outercover (Jacket) surrounds the tape to protect against weathering and mechanical damage.

## Denso Marine Piling Tape

Denso Marine Piling Tape is a synthetic fiber-reinforced tape impregnated and coated with a specially formulated, petrolatum based compound containing inert fillers and water displacing agents. The tape provides a long-lasting anti-corrosion membrane for steel and concrete surfaces. Applied spirally and with sufficient tension, Denso Marine Piling Tape displaces water and develops a water resistant bond. It provides the primary corrosion protection in the SeaShield™ Series 2000FD System. If the surface to be protected is pitted by 2 mm or more in depth then a layer of Denso SeaShield™ Primer should be applied over the pitted area. If there are irregular shapes, plate edge interfaces, brackets or similar then Denso Mastic can be used to contour these areas to provide a smooth profile for tape wrapping.

## SeaShield™ Jacket

SeaShield™ Jackets are made of proven HPDE which is UV resistant, durable and tough. The outercovers provide mechanical protection against the elements and accidental impact. All Series 2000FD Jackets are custom manufactured with HDPE bars so the outercover can be bolted around the pile with hoop tension. They are secured with 316 SS marine grade stainless steel bolts, nuts and washers.
