

SeaShield™ Marine Systems

Denso Rigspray can be used on offshore rigs and structures to protect areas subjected to high corrosion.

Rigspray

A polyester two-part high solids reinforced glass flake coating that offers outstanding resistance to corrosion and abrasion.

Rigspray has been designed specifically for the long term protection of steel structures exposed to corrosive marine environments. It is ideally suited for the use in the oil industry on offshore structures in areas such as splash zones, underdeck areas, riser pipes. With the simple introduction of a non-slip element, it is also suited for helidecks, main deck surfaces and all areas subject to extreme mechanical damage and erosion.

Multi-layer coating can still be achieved if desired, as a patch repairing if necessary, due to the excellent inter-coat adhesion properties.

Features

- Excellent corrosion resistance
- Fast dry and set times
- High build up to 40 mils in one coat
- High abrasion resistance
- Excellent undercutting resistance
- Very low water permeability
- Excellent water/sea water resistance
- High temperature tolerance
- Excellent cathodic disbondment results

Rigspray coated steel sheet piles being driven into the mudline for a transportation project in Manhattan, NY.

New sheet pile just after Denso Rigspray was applied (55" (1.4 m) wide x 45' (13.7 m) long weighing over 6,000 lbs (2700 kg)).

Side view showing initial phase of the Boston Marina using Denso Rigspray steel sheet piles.

One-coat protection for steelwork in marine environments.

The one-coat glass flake reinforced polyester coating which can be applied by airless spray to achieve a dry film thickness of 30 - 40 mils in a single coat.
