

# SEASHIELD™ MARINE PROTECTION SYSTEMS

FULL LINE OF PILE PROTECTION SYSTEMS

PROTECTION FOR:

- Steel Piles
- Timber Piles
- Concrete Piles
- Pile Rehabilitation
- Sheet Piles
- Offshore
- Pile Risers and more

## SERIES 2000FD™

### Ultimate Steel and Concrete Pile Protection System

The ultimate heavy-duty pile protection system for pilings in the most aggressive environments. It accommodates piles with cylindrical and octagonal configurations and is applied with a controlled tensioning system.

## SERIES 100™

### Steel, Concrete & Timber Pile Protection System

A medium-duty pile protection system with a marine grade petrolatum tape and HDPE outercover secured with a strapping system. Seals out oxygen and water, effectively stopping corrosion on metal surfaces. The system also prevents spalling and corrosion of steel reinforcement in concrete piles.

## SERIES 70™

### Durable Fiberglass Wrap System

A durable wrap system that is comprised of an inner layer of a marine grade petrolatum tape with a moisture cured resin impregnated tape outer layer that can accommodate new and hour-glassed timber piles and corrosion prevention of steel and concrete piles.

## SERIES 80™

### Steel, Concrete & Timber Pile Protection System

A light-duty pile protection system that is comprised of a layer of Denso SeaShield™ Primer followed by a double layer of Denso Marine Piling Tape™ and completed by adding a double layer of Densopol 60/80.

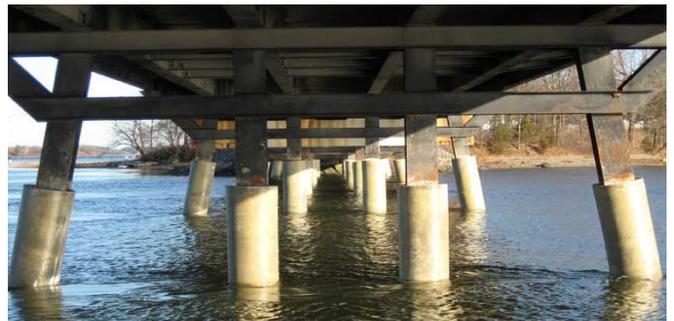

## SERIES 400™

### Non-Corrosive Structural Repair for Timber Piles

Structural repair system that doubles the strength of the original timber pile using Fiber-Form Jacket, C-GRID® 450 and SeaShield 510 UW Grout, SeaShield 550 Epoxy Grout or SeaShield™ 311 Underwater Epoxy Grout.

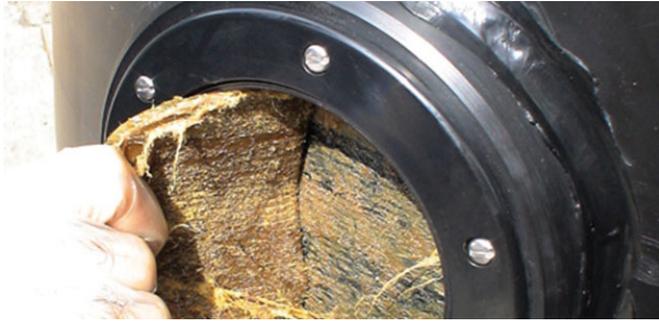

## SERIES 500™

### Heavy-Duty Fiberglass Jacket Pile Protection

The system can be applied above and/or below the water with inexpensive pumping equipment or poured into the pile jacket. The Series 500 System is tough, durable and provides the ultimate protection to restore steel, concrete and timber piles.

## INSPECTION PORT™

### Optional addition to the 2000FD System

The patented Inspection Port allows for rapid inspection of the substrate without requiring removal of the entire system. The ports can be added to the SeaShield 2000FD System at strategic points to allow easy inspection of the pipe substrate underneath without disturbing the rest of the system in the process.

## EPOXIES & GROUTS

### Underwater Epoxies & Cementitious Grouts

Helps provide structural stability and corrosion protection on all types of piles. Non-shrink cementitious grouts and water displacing epoxy grouts available.

## SZ UNDERWATER EPOXY

### Solvent Free Underwater Epoxy Mastic

Patching compound used for repairing pits, cracks and voids in steel, concrete, wood and other surfaces. Has the unique ability to be mixed, applied and cured underwater.

## FIBER-FORM JACKETS

### Custom Fabricated Fiberglass Jacket

Custom fabricated fiberglass jacket to structurally restore and protect concrete, timber and steel piles. The Fiber-Form Jacket is of the highest quality construction to meet Engineering Specifications to withstand hostile marine environments.

## RIGSPRAY

### Heavy Duty Marine Liquid Coating

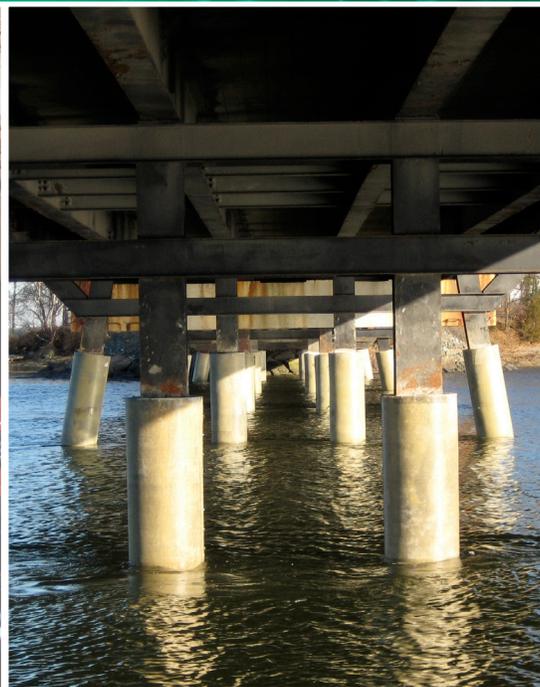

A polyester two-part high solids reinforced glass flake coating that offers outstanding resistance to corrosion and abrasion. Great for sheet piles and offshore platforms.

## 2020SP™

### Outercover Jacket and Wall Attachment

A petrolatum system for protection of sheet piles, comprising of HDPE jacket with welded supporting bars. Perfect for corrosion protection on sheet pile walls in harsh, aggressive, splash and tidal zone marine environments.
